Obituary

Dr. William Bengston, Ph.D.

William (Bill) F. Bengston, passed away peacefully at his home on April 16, 2025, at the age of 75 surrounded by family. He is survived by his wife Margaret, his two children Brian & Elizabeth along with their spouses, four grandchildren, as well as his brother and sister.

Bill was a man of immense humor, curiosity and intelligence who loved his family dearly. He was a professor of statistics and research methods at St. Joseph's University for 40 years, a researcher, and an author. He had so many passions — he loved music, he loved to play

tennis and table tennis, he swam competitively, he loved to sail, and he dedicated a lot of time to his community as a library and school board member.

His healing research produced the first successful full cures of transplanted mammary cancer and methylcholantrene - induced sarcomas in experimental mice with the hands-on technique that he helped develop. Mice that had successful full cures also had no recurrences of the same cancer. His research continued over forty plus years, and he has numerous peer reviewed academic publications. His memoir, *The Energy Cure*, is published by Sounds True Publishers. He has also lectured widely in the U.S., Canada, and Europe.

Bill also investigated assorted correlates to healing such as EEG and fMRI entrainment, and geomagnetic micropulsation anomalies in healing space. His current work involved the attempt to reverse engineer healing and reproduce healing without the healer, and to develop therapies that can be scaled.

In lieu of sending flowers, the family asks you to please consider donating to the Society for Scientific Exploration <https://scientificexploration.org/Donate>
